- 2001 IDIBC Award of Excellence, Office (Sierra Wireless)
- 2001 BOMA Earth Award (Discovery Place)

Summary of Professional History

Louis Louw has over ten years of experience in the Architectural Industry. Since 1989, he has produced detailed Working Drawings for a wide variety of buildings. His work includes experience with public health care facilities, high tech commercial office buildings, public schools, government projects, industrial and residential developments, and high-end private housing projects.

Most recently, Louis has produced contract documents for the Calgary Beltline Building A project in Calgary, Alberta. This was the first phase of a high tech office complex project for IBM. The project benefitted greatly from Louis' broad knowledge of construction technology and integrated design.

Louis is responsible for the production and coordination of CAD drawings from the design development phase on through to the contract documents phase. In addition, as a result of his continued interest in computer technology, Louis has claimed the position of IT/CAD manager of the firm, and has successfully lead the harmonious integration of a dual platform network system (involving both MAC and PC computers) at Bunting Coady Architects.

Louis believes that careful detailing and planning can result in spaces that are compatible with the environment, culture, aesthetics and economics of any area.
